

COMPARING TWO HABITATS

	Rainforest	Prairie
Average Summer Temperature	28°C	24°C
Average Winter Temperature	28°C	1°C
Average Yearly Rainfall	600 cm	71 cm
Average Yearly Snowfall	None	51 cm

Exploration Connection: Comparing habitats

Here are two habitats that exist in different parts of the world—a tropical rainforest and a prairie grassland. Take a close look at each habitat. Think about the kinds of things that might affect how many different species live in each place. How do the two places differ in temperature and the amount of rainfall they receive? 💡

- In which of the two places would you expect to find more kinds of plants and animals?
